Other Bolgiano Lawn Grasses

Kentucky Blue Grass (*Poa pratensis*). While it requires about two years to become well established, Kentucky Blue Grass is known for the beautiful lawns it makes. Creeping underground stems produce a tough sod that thrives best in neutral soils and medium moist climates. Extreme hot dry weather retards its growth and mowing under 1½ inches is not recommended. May be sown alone or in grass mixture. Lb. $1.00; 10 lbs. $9.00; 25 lbs. $16.00.

Red Top (*Agrostis alba*). Red Top belongs to the Bent family and is often used in lawn mixtures as a nurse grass. It will last about three years under close mowing. While it has good value in lawn grass mixtures, it is not recommended to be planted alone for turf unless a quick temporary cover is wanted. Lb. $1.10; 10 lbs. $10.00; 25 lbs. $19.50.

Bent Grass (*Agrostis tenuis*). Bent Grasses are fine-bladed sorts that have a tendency to creep and spread. They are used principally on golf greens and in fairway mixtures. The popular varieties are Astoria and Highland. Astoria, lb. $1.35; 10 lbs. $13.00. Highland, lb. $1.25; 10 lbs. $11.50.

Penncross Bent (*Agrostis palustris*). A recent release from Penn. State University, a truly fine creeping Bent Grass from seed. It surpasses Seaside Bent in density and is more disease resistant. Especially adapted for golf putting greens. Lb. $4.25; 10 lbs. $40.00.

Rye Grass (*Lolium multiflorum*). A quick-growing annual also known as Italian and Common Rye Grass. Valuable as a nurse crop in lawn mixtures and thrives well in almost any soil or climate. Lb. 35c.; 10 lbs. $3.00; 25 lbs. $5.75.

Perennial Rye Grass (*Lolium perenne*). The most lasting of all Rye Grasses, remaining in a lawn for several growing seasons. Texture is somewhat finer than that of Domestic Rye. It is a good nurse grass for all mixtures seeded in the spring. Lb. 45c.; 10 lbs. $4.00; 25 lbs. $7.75.

Merion Kentucky Blue Grass. Developed by the USGA Greens Section, Merion is accepted as a superior strain for use on lawns and turf where ordinary Blue Grass is adapted. With all the characteristics of regular Kentucky Blue Grass, it has these added advantages: sturdiness, drought and disease resistance, withstands closer mowing. Used in mixtures or may be seeded alone. Lb. $2.50; 10 lbs. $24.00.

Creeping Red Fescue (*Festuca rubra*), **Pennlawn Strain.** A perennial, spreading from roots that creep underground, producing a dense green turf of needle-like leaves. Highly resistant to drought and disease and thrives in all types of soil. Sow in combination with other grasses. Lb. $1.15; 10 lbs. $10.50; 25 lbs. $20.00.

Chewings Fescue (*Festuca rubra fallax*). This important component of all good shady lawn mixtures forms a low, dense, mat-like turf of fine needle-like leaves. It is popular for lawns and golf courses because of its drought resistance and ability to thrive on most soils. Lb. $1.15; 10 lbs. $10.50; 25 lbs. $20.00.

Kentucky 31 Tall Fescue. A strain of tall Fescue adapted to wet, poorly drained soils, yet it produces well on dry soils of low fertility. The foliage is coarse. Used mostly as a pasture grass. Lb. 50c.; 10 lbs. $4.50; 25 lbs. $8.50.

Poa Trivialis. Known as the Blue Grass of the shade. Thrives best on sweet or alkaline, well-fertilized soils. Its rich green color and fine texture make it very popular as a shade grass particularly in low, moist areas. Lb. $1.10; 10 lbs. $10.00; 25 lbs. $18.75.

White Clover (*Trifolium repens*). Some White Clover is usually included in lawn grass mixtures, for it makes an excellent turf that stands constant trampling. It is dwarf in habit, spreads rapidly and is very hardy. Lb. $1.25; 10 lbs. $11.50; 25 lbs. $18.00.

Prices quoted on grass seed do not include postage. See order blank in front of catalog for Parcel Post rates. If postage is included with order, seed will be sent by Parcel Post, otherwise shipment will be made by Express Collect.

The wrinkled varieties are not as hardy as the small, round sort and if planted early should have a dry soil or they are liable to rot in the ground. They are, however, the sweetest and best-flavored varieties.

CLOVERS

Inoculate all Legume Seed (Alfalfa, Clovers and Lespedeza) with Nitragin and insure a good stand. **See page 48**

Alfalfa (*Medicago sativa*). A perennial legume thriving best on well-drained, heavily limed soils. Being a heavy feeder, Alfalfa requires an abundance of available plant food, particularly phosphoric acid. Varieties most used in Washington area are Oklahoma approved, Kansas Common, Buffalo and Williamsburg.

Alsike (*Trifolium hybridum*). The hardiest of Clovers. Prefers a rather heavy silt or clay soil with plenty of moisture.

Crimson Clover (*Trifolium incarnatum*). A winter annual. Improves poor soils and furnishes forage when pastures are resting. Sow in spring, summer and fall. Reseeding types also available.

Ladino Clover (*Trifolium repens latum*). This perennial is known as the Giant White Clover. A low-growing, leafy plant with succulent and somewhat coarse stems. Under proper moisture conditions, these stems will take root at the joints, and in this manner thicken up the stand.

Medium Red or June Clover (*Trifolium pratense*). Does best on rich, well-drained soil containing an abundance of lime. Makes two crops of hay a year and may be sown in spring or fall.

Chesapeake Red Clover. A superior, longer-lived strain of Red Clover adapted to areas where anthracnose diseases are prevalent.

Mammoth or Sapling (*Trifolium pratense perenne*). Larger, coarser and about two weeks later in maturing than Medium Red Clover. Only one crop can be harvested each season.

White Clover (*Trifolium repens*). Usually included in lawn grass mixtures; also valuable in permanent pastures. Sow in spring.

White Sweet Clover (*Melilotus alba*). Grows 3 to 5 feet tall and is valuable for soiling; ensilage and bees. Lasts for years if cut before flowering and on rich soil will produce three crops a year.

Birdsfoot Trefoil (*Lotus corniculatus*). Valuable plant for hay and for use in permanent pasture mixtures. Stays green and produces excellent feed during hot summer months.

Field of Clover

Kobe Lespedeza

An improved variety of common Lespedeza, valuable as a hay and pasture crop. It grows 15 to 18 inches tall. Matures 3 weeks later than Korean, extending the grazing season. Sow 25 pounds per acre.

Korean Lespedeza

The most popular of the Lespedeza family, growing 12 to 15 inches tall. Grows readily in acid soil and reseeds itself. Drought-resistant; ready to cut in August. Sow February 1 to the last of May.

Sericea Lespedeza

A perennial for poor soil; withstands droughts and gives two or more cuttings per season after the first year. Cut when a foot high.

HAY and PASTURE MIXTURES

Kentucky Blue Grass (Poa pratensis)

Although it does well on most any good soil, Blue Grass requires about two years to become established and is therefore often sown with other grasses. Sow in spring or fall.

Tall Fescues

Alta Tall Fescue. A deep-rooted, long-lived perennial grass with many shiny, dark green leaves coming from the crown of the plant. It makes a very close turf if conditions are favorable.

Kentucky 31 Tall Fescue. Same characteristics as Alta except that it is more drought resistant.

Orchard Grass (Dactylis glomerata)

An early bunch grass which stays green in spite of heat and drought. Lasts for years.

Rye Grass (Lolium multiflorum)

An annual all-purpose grass used in lawn mixtures and for hay and pasture.

Perennial Rye Grass (Lolium perenne)

A splendid permanent pasture grass doing best on moderately moist soils.

Red Top or Herd's Grass (Agrostis alba)

Used in most lawn mixtures and a good pasture grass. Does well in low, wet meadows. Sow in spring or fall.

For other grasses refer to page 1

Timothy (Phleum pratense)

This important hay and pasture grass should be sown at the rate of 12 pounds per acre in spring or fall. One popular mixture uses 10 pounds Timothy and 6 pounds Clover; another has 8 pounds Timothy, 6 pounds Clover (Alsike or Mammoth), 6 pounds Red Top and 10 pounds Alta Fescue to the acre.

Bolgiano's Permanent Pasture Mixture

These mixtures are composed of only the best germinating seeds and are sure to give satisfaction.

For Uplands: A special mixture of the best grasses and clovers for establishing a permanent pasture.

For Lowlands: A mixture of grasses and clovers adapted for moist or slightly sour lowlands.

Dwarf Essex Rape

An annual resembling kale which furnishes good pasture for poultry and livestock within six weeks after sowing.

Golden Foxtail Millet

Makes an enormous yield of hay which should be cut just as the heads begin to form. Sow from May through July.

Hairy Vetch (Vicia villosa)

Valuable as a winter cover crop to prevent leaching and to turn in for fertilizer. It is also a good forage plant.

Sudan Grass (Holcus sudanensis)

Similar to Timothy in food value, this provides an easily cured hay forage crop. Must be cut before frost. Sow in late spring. Often sown with Soy Beans—20 pounds Sudan Grass and one bushel Soy Beans to the acre.
